Australian Bureau of Statistics

6298.0.55.001 - Labour Force Survey Standard Errors, Data Cube, Feb 2014

Latest ISSUE Released at 11:30 AM (CANBERRA TIME) 13/02/2014

Summary

About this Release

This spreadsheet allows the calculation of standard errors for estimates from the monthly Labour Force Survey (LFS).

The spreadsheet can be used to calculate the standard errors for the ASGS based regional estimates and 2011 Census based population revisions, introduced in the Jan 2014 release of Labour Force, Australia (cat. no. 6202.0).

The SE models for July 2013 (50% old sample, 50% new sample) and onwards will be subject to revisions in the future, as more information is known about the new sample after it has been introduced.

For information on how to use this spreadsheet see Information paper: Labour Force Survey Standard Errors, 2005 (cat. no. 6298.0).
